About ONCC

- ONCC is an Online Cloud Based Compiler for various programming languages.
- User can select the programming language of their choice and compile his/her code using compiling modules created and tested in Python Flask.
- Our project currently supports compilation of Java and Python language-based codes.
- It is not necessary to login and register to use this compiler. But if a user wants to use feature like saving the code for future use or references, then the user must register and create an account.

Persona I

PICTURE & NAME

Name: Dan William

Age: 24

Designation: Student

DETAILS

Role: Student

Dan is a Student at Pace University. As an Information Technology student, he is struggling to learn and practice at least two most demanding computer languages so that he can prepare for his interviews to crack coding assessments by practicing his skills at a single platform which is available online where he can write, test and save his code without wasting extra memory space of his computer and save time as well. He can subscribe an online compiler platform, write, save and share the codes for future use.

GOAL

He wants to get rid of installing multiple IDE's and save his time to practice his coding skills for the assessment tests. Also, he wants to save it for later use.

Persona 2

PICTURE & NAME

Name: Ethan Coufal

Age: 30

Designation: Software Developer

DETAILS

Role: Software Developer

Ethan is an independent mother of her single child. She is a struggling software developer working from home. She has to code in java as well as she has got a task to learn python from her company. But she barely has time to download multiple IDEs to learn, test and save her code simultaneously by keeping in mind the storage space of her computer.

GOAL

She needs a single platform where she can write, test and save her code without wasting the memory of her PC. So that, she can save the time and access her code for long term by saving the code.

Persona 3

PICTURE & NAME	DETAILS	GOAL
 <p>Name: John McCarthy Age: 27 Designation: Student</p>	<p>Role: Student</p> <p>John is a student at Pace University. Being a Graduate student in Computer Science, writing and compiling codes in different languages is part of his daily life. Sometimes, He finds it difficult to get the subscription for different IDEs because it's costly and time consuming. It will become more costly if he will take subscription for all different IDEs for each coding languages. Therefore, he yearns for a single platform where he can compile, run and save time at least more frequently used languages (Java, Python, C#, C, C++) at the same platform by making the coder's life easier.</p>	<p>He wants a different compiler at single platform, where he can compile at least more frequently used languages (Java, python, C#, C/C++) to make his coding life easier and save time.</p>

Recap of Sprints 1-5

- Learned and Developed flask web application.
- Created registration/login page.
- Created drop-down menu for C, C++, C#, Java and Python.
- Developed Compiler modules for Java and Python Programming languages.
- Created MongoDB database for user login and registration.
- Aggregation of the Tables for saving code to specific user.
- Aggregation of the Tables for sharing code.
- Researched and finalized AWS cloud platform.
- Onboarded whole team on AWS platform.
- Integration of DynamoDB on AWS.
- Hosted a Web Application on AWS cloud for user's convenient accessibility.

New Technologies

- AWS- Hosting our project on the cloud with AWS enables us to build, deploy and manage our website with reliability and redundancy.
- AWS IAM- Security roles
- AWS Authy- Authy is an application we use for Multi-factor Authentication. Authy the mobile application will send you a 6-digit token, when typed into the console proper will enable you to login to the AWS Services.
- boto3- In order to configure, create and manage AWS services such as Amazon Elastic Cloud (EC2) and Amazon Simple Storage Services (S3), we are using the AWS SDK for python which is know as boto3.
- DynamoDB- A fully managed proprietary NoSQL database that allows us flawless accessibility and seamless scalability.

Boto 3

Sprint 6 Report

In this sprint, we couldn't be able to complete the highlighted story because it is blocked by the bug.

Completed Issues

T	Key	Summary	P	↓
	ONCC-26	As a guest user I want to access a web application on cloud server so that I can compile code in any programming language.	↑	
✓	ONCC-24	Get the reference of the C compiler using python pre-processing module	↑	
✓	ONCC-21	Migration of mongoDB users table into dynamoDB Part-2	↑	
✓	ONCC-20	Onboarded whole team on AWS platform	↑	
✓	ONCC-31	Update User Manual for sprint 6	↑	
✓	ONCC-29	Make sprint 6 presentation slides	↑	
✓	ONCC-25	Make a module to take pre-defined input from user	↑	
✓	ONCC-23	Installation of C compiler module on system	↑	
✓	ONCC-35	Update wiki page for sprint 6	↓	
✓	ONCC-30	Update Technical paper for sprint 6	↓	

Incompleted Issues

T	Key	Summary	P	↓
■	ONCC-36	As a Guest User, I want to have C programming language option so that I can compile my code in C language	↑	
✓	ONCC-48	Merging the C language compiler module with Flask web application	↑	
✓	ONCC-28	Update website design and make it more user friendly	↓	
■	ONCC-49	Connectivity between the C language module and web application	↑	

Acceptance Criteria

Key	Summary	Label
<u>ONCC-26</u>	Given that being a Guest User, I want to have a web application that should display multiple options of programming language, So that I can compiler program in any chosen programming language.	Cloud Access
<u>ONCC-36</u>	<p>Given that being a Guest User,</p> <ul style="list-style-type: none">• I want to have the options to choose a programming language i.e., C, So that I can write and compile the code in C programming.• I want to compile the code in C language, So that I can get the desired output, or it should display error.• I want to have an input field to enter the predefined input for the code.• I want compiler to take the input from the input field and compile code with pre-defined input	Compiler

Test cases

Test Cases for	Key	Steps	Test Cases	Test Data	Expected Results	Actual Results	Status
Cloud access	ONCC-26	1	Options available for C compiler in drop-down menu	Selecting C option from drop-down menu	C compiler will be selected and "Write code in C language here" placeholder will be displayed in the text area	C compiler is selected and "Write code in C language here" placeholder is displayed in the text area	PASS
Compiler	ONCC-36	1	Writing and compiling the code in C language.	Enters the code in C language and click on Run button	Code should be compiled successfully and get the desired output or errors	No output or error message displayed	FAIL
					Code is not successfully compiled and shows error	No output or error message displayed	FAIL
		2	Compiling empty code	Click on Run button without writing code	Will show error for empty code in error field	No error message displayed	FAIL
		3	Running test code in python pre-processing module	Entering C code in pre-processing module	Getting desired output in String variable	Got output in the String variable	PASS
					Getting expected error in Error variable if code is wrong	Got desired error in the Error variable	PASS
					Entering Predefined Input for the code to compile with input	Accepting input for written code and compiling with the input	PASS
		4	Entering Predefined input	Entering input in the input field for the compilation of code with input parameter	Taking input from input field and adding it into the code	No output	FAIL
					Showing input missing when the field is empty when required	No Output	FAIL

Sprint 6 Burndown Chart

Product Backlog

▼ Backlog (12 issues)		30	0	0	Create sprint
<input type="checkbox"/>	ONCC-37 As an Existing User, I want to have the Share option so that I can share written code	CLOUD ACCESS	6	↑	
<input checked="" type="checkbox"/>	ONCC-38 Creating a shareable URL for sharing code		2	↑	
<input checked="" type="checkbox"/>	ONCC-39 Updating front-end for share feature		2	↓	
<input checked="" type="checkbox"/>	ONCC-40 Accessing share code using URL		2	↑	
<input type="checkbox"/>	ONCC-41 As an New/Existing User I want to have the New option so that I can write New program	CLOUD ACCESS	3	↑	
<input checked="" type="checkbox"/>	ONCC-42 Creating and saving session of logged in user in logDB.		2	↑	
<input checked="" type="checkbox"/>	ONCC-43 Embedding compiler into the web Application		4	↑	
<input checked="" type="checkbox"/>	ONCC-44 Make presentation slides for sprint7		2	↑	
<input checked="" type="checkbox"/>	ONCC-45 Update technical Paper		1	↑	
<input checked="" type="checkbox"/>	ONCC-46 Update User Manual		2	↑	
<input checked="" type="checkbox"/>	ONCC-47 Add AWS service module in the architecture diagram		1	↓	
<input checked="" type="checkbox"/>	ONCC-50 Exploring and working on new technologies Boto3, AWS authy		3	↑	

Sprint 7 Planned Stories

Issue Type	Key	Summary	Priority	Status
Story	<u>ONCC-37</u>	Save/Share options page	Highest	To-do
Story	<u>ONCC-41</u>	New options page for new program	Medium	To-do

Moving forward in this semester...

- Adding more functionality, after user selects a particular language, a pop message should display in the source code area saying, “you can write your code in java/python/C++”.
- Adding share button to share the source code.
- Adding save button to save the source code.
- Creating and saving a session of user’s login activity.
- Embedding compiler into the web application.
- Learning Dockers and using it for making multiple language containers.

Retrospectives

What went well

- Successful frequent meetings and teamwork .
- Meetings, and documentation works.
- Successfully worked with Jira tool

What needs improvement

- Need more focused and comprehensive planning to avoid mid sprint tasks and good traceability on Jira.
- Explore and learn services provided by AWS i.e., Boto3, AWS authy
- Secret key issues python flask development.

Next Steps

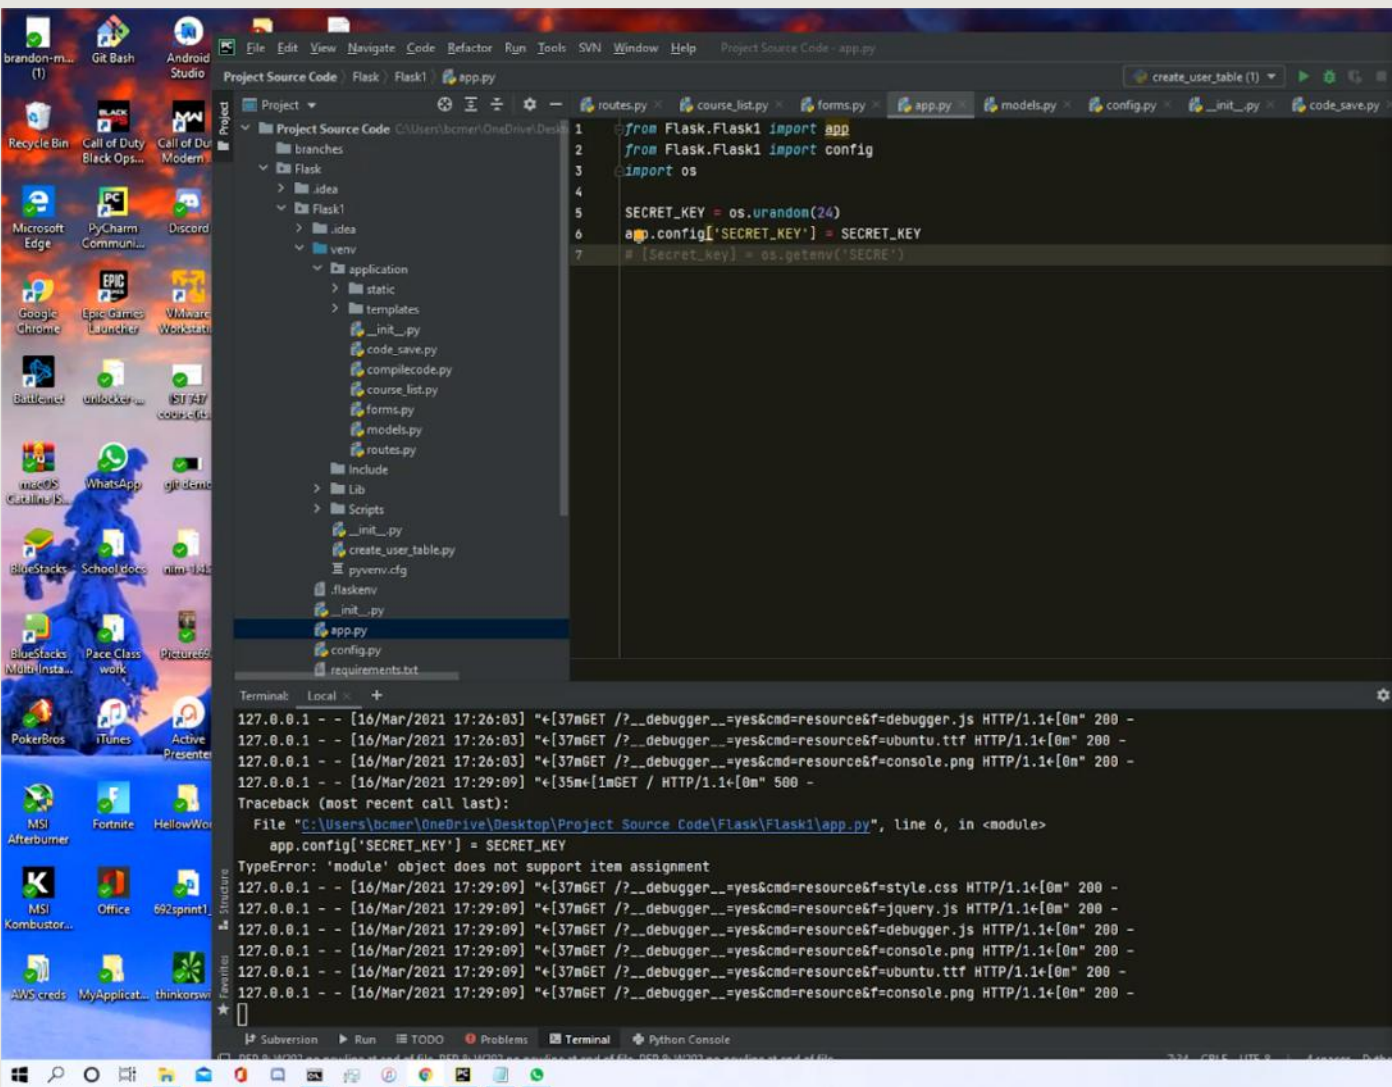

- Connectivity between the C language compiler and web application.
- Developing a language module for C# compiler.

Demo

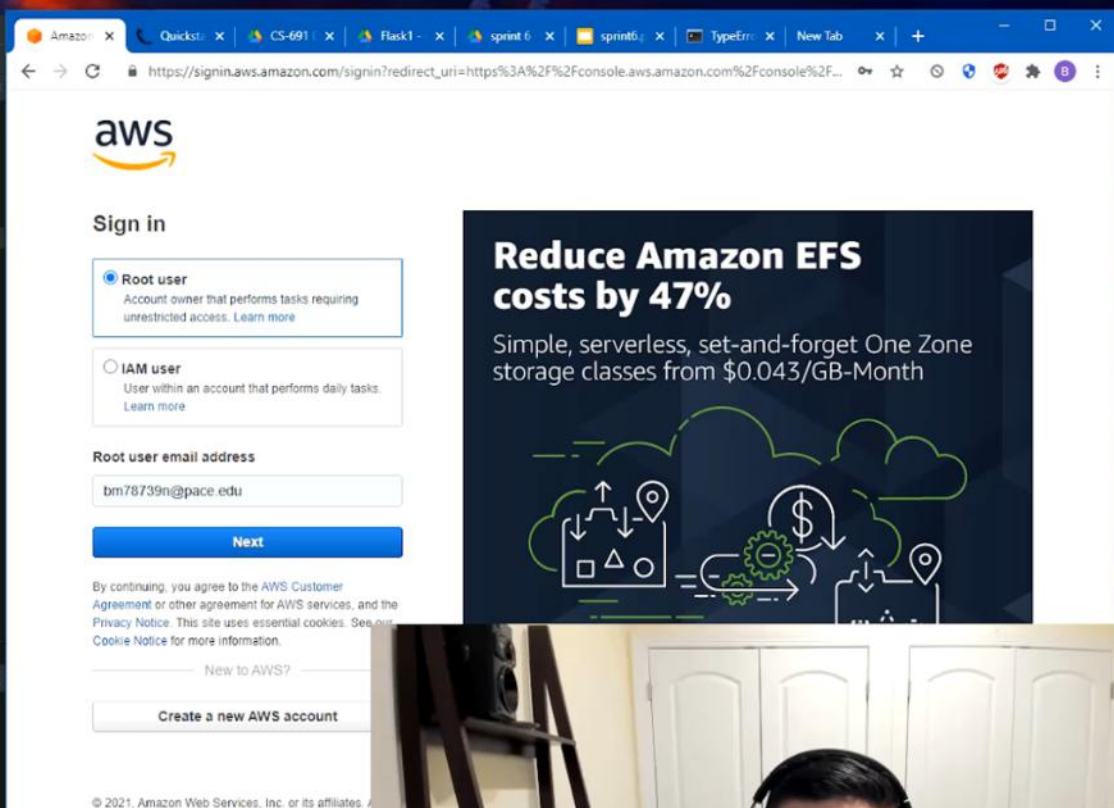

The screenshot shows a Windows desktop with a taskbar at the bottom containing icons for various applications including Git Bash, Android Studio, Recycle Bin, Call of Duty Black Ops, Microsoft Edge, PyCharm, Discord, Google Chrome, Epic Games Launcher, VMware Workstation, Battle.net, unblocker, GTA V, Call of Duty: Warzone, WhatsApp, gitea, macOS Catalina, BlueStacks, School Docs, nlm-141, BlueStacks Multi-Insta..., Pace Class work, Picture69, PokerBros, iTunes, Active Presenter, MSI Afterburner, Fortnite, HellowWork, MSI Kombustor..., Office, 6925pnt1, AWS creds, MyApplicat..., and thinkorsw... The main window is an IDE (likely PyCharm) showing a project named 'Project Source Code - Flask1'. The file explorer on the left shows a directory structure with files like __init__.py, code_save.py, compilecode.py, course_list.py, forms.py, models.py, routes.py, include, lib, Scripts, __init__.py, create_user_table.py, pyvenv.cfg, .flaskenv, .app.py, config.py, and requirements.txt. The main editor window shows the content of 'app.py':

```
1 from Flask.Flask1 import app
2 from Flask.Flask1 import config
3 import os
4
5 SECRET_KEY = os.urandom(24)
6 app.config['SECRET_KEY'] = SECRET_KEY
7 # {secret_key} = os.getenv('SECRET')
```

The terminal at the bottom shows a series of HTTP requests and a traceback error:

```
127.0.0.1 -- [16/Mar/2021 17:26:03] "GET /?__debugger__=yes&cmd=resource&f=debugger.js HTTP/1.1" 200 -

```

The screenshot shows the AWS Sign in page. The URL in the address bar is https://signin.aws.amazon.com/signin?redirect_uri=https%3A%2F%2Fconsole.aws.amazon.com%2Fconsole%2F.... The page has the AWS logo and a 'Sign in' heading. There are two options for signing in: 'Root user' (selected) and 'IAM user'. The 'Root user' option is described as 'Account owner that performs tasks requiring unrestricted access. Learn more'. The 'IAM user' option is described as 'User within an account that performs daily tasks. Learn more'. Below these options is a field for 'Root user email address' with the value 'bm78739n@pace.edu'. A blue 'Next' button is below the email field. At the bottom, there is a link for 'New to AWS?' and a button for 'Create a new AWS account'. On the right side of the page, there is a promotional banner for Amazon EFS with the text 'Reduce Amazon EFS costs by 47%' and 'Simple, serverless, set-and-forget One Zone storage classes from \$0.043/GB-Month'. The banner includes a diagram showing a cloud with a server, a location pin, and a dollar sign with a minus sign, indicating cost reduction.
